

Important Reasons to Immunize Your Child

You want to do what is best for your children. You know about the importance of car seats, baby gates, and other ways to keep them safe. But, did you know that one of the best ways to protect your children is to make sure they have all of their vaccinations?

Immunizations can save your child's life.

Because of advances in medical science, your child can be protected against more diseases than ever before.

Immunisation Schedule

AGE

At birth

1-2 months

3-4 months

5-6 months

12-15 months

TYPES OF IMMUNISATION

BCG	Triple Antigen (DTPa)	Triple Antigen (DTPa)	Triple Antigen (DTPa)	Varilix
Hepatitis B	Oral Polio/IPPV	Oral Polio/IPPV	Oral Polio/IPPV	MMR
	Hib	Hib	Hib	
	Hepatitis B	Hepatitis B	Hepatitis B	
	Prevenar (Optional)	Prevenar (Optional)	Prevenar (Optional)	
	Rotorix (Optional)	Rotorix (Optional)	Rotorix (Optional)	

Vaccination is safe and effective.

All vaccines are only given to children after a long and careful review by scientists, doctors, and healthcare professionals. Vaccines will involve some discomfort and may cause pain, redness, or tenderness at the site of injection but this is minimal compared to the pain, discomfort, and trauma of the diseases these vaccines prevent.

Immunization protects future generations.

Vaccines have reduced and, in some cases, eliminated many diseases that killed or severely disabled people just a few generations before.

1 1/2 years

2 years

2 1/2 years

4-6 years

6-7 years

9-26 years

Triple Antigen (DTPa)	Hepatitis A	Hepatitis A	MMR	Double Antigen (DTPa)	BCG
Oral Polio/IPPV				Oral Polio/IPPV	Rubella
Hib				BCG (If no scar)	Gardasil (Optional)
Prevenar (Optional)
